I have spent ten years as a journalist investigating one product and one claim – Vaccines are safe and effective. That is what we're told. I've only ever asked one question: how did they determine they were safe? And as my investigation shows, they aren't.

I used to believe vaccine injury was rare. I now believe vaccines injure and kill more people than the diseases we vaccinate for.

Here's what medicine wants you to think about. Before vaccination, measles killed about 400 to 500 people a year in America, a death rate of roughly one per 500,000. "Don't you care about those 500?", they ask.

But studies have shown that a child who catches measles has a 10% reduction in future heart disease. A million people die every year from heart disease in America. Reduce that by 10 to 20% and you've just saved 100,000 people by letting them catch measles. They don't want to talk about those 100,000.

Measles in childhood for women produces a 50% reduction in cervical cancer, a 20% reduction in non-Hodgkin's lymphoma, and a 60% reduction in Hodgkin's lymphoma.

Our immune system works exactly like working out with weights. It gets stronger by being challenged. We need these diseases to prime it for future disease. And by vaccinating the way we do, we are making our species weaker and weaker. Our immune systems can't keep up. They are now attacking our own bodies.

Science has made a mistake.
